Ticketing with a resale cap set by the organizer

Fans can resell their tickets.
The organizer decides the maximum price.

Working prototype on Solana devnet

The problem

How do we stop tickets reselling at unreasonable prices?

A price cap can fail when tickets can move freely.
A seller can collect payment elsewhere, then send the ticket.

€25

Original ticket price

€60

Reseller's asking price

The proposed solution

The organizer sets the resale cap

Fairtix checks the asking price before a ticket enters resale.
A listing above the cap fails. The seller keeps the ticket.

€27.50

Maximum resale price

€25.00 face price
10% permitted increase
5% organizer royalty

The technical solution

Solana checks every ticket transfer

Token-2022 transfer hook

Solana calls our hook whenever a ticket moves.
The hook accepts only a valid marketplace escrow.
The program releases the ticket on a sale
or returns it when the seller cancels.

**A signed
direct transfer
fails**

Another website can call the program. It must follow the same rules.

[Token-2022 Transfer Hook documentation](#)

Payment and delivery

The resale settles in one transaction

Buyer pays

€27.50

Seller	€25.58
Organizer (5%)	€1.37
Fairtix (2%)	€0.55

The program pays the recipients and delivers the ticket.
If any part fails, payment and ticket delivery roll back.

Example uses test credits. Royalty rounds down to the nearest cent.

The working prototype

Three checks on Solana devnet

Try the resale rule

Test credits only

General admission · Example event

Friday, after lectures

6 Nov

Over the cap

5% of every resale goes to the organizer.

Face price

€25.00

Resale cap

€27.50

Your asking price

€ 60.00

Try this price →

The organizer caps resale at €27.50 for this event. Lower your price to list it.

€60 listing

Rejected above the €27.50 cap

Failed transaction

Direct transfer

Rejected even with the holder's signature

Failed transaction

€27.50 resale

Confirmed ticket and payment

The deployed programs

Two Solana programs, two responsibilities

Marketplace

Stores the cap and royalty.
Controls ticket escrow.
Checks and settles each resale.

[Deployed marketplace](#)

[Marketplace source](#)

[Token accounts have immutable owners to block an authority change.](#)

Transfer hook

Checks every ticket transfer.
Rejects moves outside valid escrow.
Keeps the rule active in other wallets.

The live prototype

A resale you can verify

fairtix-whu.vercel.app/demo

Buy as the seller. Test the €60 request and direct transfer.
Then complete a €27.50 resale as the buyer.

What the cap covers

The program enforces the recorded sale price. Cash side payments and wallet sharing remain possible. This demo uses test credits. Euro checkout, check-in and security review are still pending.

Development upgrade authority remains active.
